and adequate moisture are present. Sprinkler or mister systems (a portable version is offered by Moss Acres) are proving ideal for “fooling” moss into growing in almost any shady spot-

even in Florida and California! To avoid rot and mold, Moss Acres typically ships moss dry, but will occasionally ship it damp in the

spring and fall seasons. Prior to transplanting, moss should be stored in a cool, dry place.

Because of its low profile growth habit, Fern Moss is the ideal ground cover for larger shady “lawn” areas, flagstone or stepping stone paths and patios, or for any location where smaller woodland plants require the contrast of a neatly tailored ground cover. Not to mention, that in dense shade it is all but impossible to establish a healthy grass lawn.

*Start a moss garden today, and find out what the Japanese have known for centuries...the serenity of moss nurtures the soul.*
